

You know a healthy eye practice is more than letters and numbers.

Comprehensive AMD Risk Management is an important mission.

- ~ AMD affects millions and is the leading cause of blindness over age 55.
- ~ Expand medical services to your patients and drive repeat office visits.
- ~ Differentiate your practice from other ECPs in your community.
- ~ Create a significant supplement annuity and testing revenue stream.
- ~ Implement a program that supports healthy vision in your patient population.

Effects of Age-Related Macular Degeneration (AMD)

“When evaluating a new piece of equipment for my practice, I ask myself three things: will the device benefit my patients, will the device benefit my practice, and will the device produce adequate revenue to cover its cost and generate a profit. My experience with the QuantifEYE[®] device for measuring Macular Pigment Optical Density (MPOD) as well as ZeaVision’s EyePromise[®] line of supplements has proven to positively answer these three questions.”

– Dr. Gary Morgan, OD
EyeTech Eye Associates
Peoria, AZ

Identify and Manage a Key AMD Risk Factor: Low Macular Pigment.

Measure. Manage. Monitor. Maintain.
